# RESINOLGUM ANTIRADON

PLASTOMERIC BITUMINOUS MEMBRANE BPP  
ALUMINIUM SHEET GAS BARRIER

Technical data sheet

REINFORCEMENT	NON WOVEN POLYESTER FABRIC
COMPOUND	BITUMEN – PLASTOMER BPP
FINISHING	RESINOLGUM ANTIRADON: POLYETHYLENE FILM
APPLICATION METHOD	FLAME WELDING
<u>DESTINATION OF USE</u>	
RESINOLGUM ANTIRADON	EN 13707 WATERPROOFING SYSTEM MULTILAYER: UNDER LAYER EN 13970 WATERPROOFING SYSTEM: GAS BARRIER
FPC CODE	GB14/92056

## Description

Elasto-plastomeric waterproofing membrane designed for special applications either as a radon gas barrier. Reinforcement made up of an aluminium sheet coupled with rot-proof fibreglass. Compound based on modified distilled bitumen ensuring high flexibility at low temperatures.

## Fields of application

It can be used as a radon gas barrier for foundations or retaining walls.

## Stratigraphy

1. Polypropylene film
2. Compound BPP
3. Non woven polyester fabric reinforcement
4. Compound BPP
5. Finishing: Polyethylene film

RESISTANCE TO ROOTS	NPD	-	-	EN 13948
PEEL RESISTANCE	NPD	N/50 mm	-	EN 12316-1
SHEAR RESISTANCE	NPD	N/50 mm	-	EN 12317-1

**Note:** NPD = No Performance Declared according to the EU Directive on Construction Products

It is impossible to ensure uniformity of color of slated products, because the only slate manufacturer makes no warranty about. All self-protected products with slate chippings undergo color changes over time as a function of exposure to atmospheric agents. These color variations tend to conform gradually. AVAILABLE COLOURS OF SLATE: Natural Gray (Standard), Red, Green, White

## Packaging

PRODUCT	THICKNESS (mm)	WEIGHT (Kg/m <sup>2</sup> )	ROLL DIMENSIONS (m)
RESINOLGUM ANTIRADON	3	-	1x10

Rolls packed on wooden pallets, wrapped with polyethylene heat-shrinkable caps.

## Warnings

Store vertically, protecting them from atmospheric agents and from too high or too rigid temperatures.

Avoid overlapping rolls and pallets.

The contact with solvents and organic fluids can damage the product.

The application surface should be smooth, dry and clean.

The application surface must be previously treated with a suitable bituminous primer, VELQUA, VELABASE or VELAFONDO GRIPERM to eliminate dust and enhance the adhesion of the membrane. The application surface must not have depressions, to avoid stagnation of rain water and must have a sufficient slope to ensure the smooth flow of precipitation (min 1.5%). In the case of applications in vertical development exceeding 2 m or media in strong slope surfaces apply suitable mechanical fasteners in the head of the cloth, then sealed with the junction of the head.

Apply the product at temperature higher than +5°C.

The installation should be discontinued in case of adverse weather conditions (high humidity, rain, etc.).

The above-mentioned values can be subject to update or change. IIVELA S.r.l. reserves the right to modify them at any time without prior notice.
